

Contour Cutting on Colored Reflective

Should you run into a customer that must print / cut on colored reflective vinyl the following will fool the FC7000 into thinking it sees white vinyl.

- 1) After printing, overlay AIP-WG, cut into small squares, on top of registration marks. Using black marker or pen and ruler copy marks showing through the AIP-WG. One layer worked on the gold reflective.
- 2) Enter Origin after setting knife in position. If you don't hit Origin marks will not be found.
- 3) Sit back and watch it cut out design.
